SCA Camping Life with a CPAP.

By Hrafn Knútsson

Having a CPAP means that you have to be concerned with powering the unit. It is not possible to have an electrical outlet at every event but we still can manage to bring our own power. First, I suggest that you be patient and shop the sales for the items I will be discussing. Harbor Freight has been a good friend in finding many of the parts, I'll use (HF) to denote items I have found there. You will also need to use good power conservation, use it for what you really need.

First you need to determine your power needs. Every electrical item in the USA has a label that states the Volts and Current requirements for it. The volts may say 100-200 volts at 50-60hz: this means 110 volts that we use in our houses. It will also have a current listed with A for amps or a mA for micro- amps, round mA up. Power is measured in Watts, most likely it is not listed, but we can calculate it if we know the Volts and Current. The formula for power is Volts * Current = Power. So my CPAP uses 1.70 A with the house volts, 110 * 1.70 = 187 Watts. You need to figure each item you will have plugged in at the same time, figure each power need; then add up all the power needs. So two CPAP for me would be 374 Watts needed.

You must have an Inverter and a Deep Cycle Marine battery. These two things are really all you must have to make it work but a few extra's makes it better.

The inverter is rated with continuous Watts and Peak Watts. You don't want it too big as you will drain the battery needlessly. So I chose a 400 Watts Continous with an 800 Watts Peak inverter (HF) for my two CPAP use. It has battery clamps that clip directly to my Battery. I would suggest that you have a second invertor on hand in case you break one. Inverters can short out, you are camping and if it gets wet you must dry it out really good before using it. Check to see what fuses it takes and have spares as well. The inverter takes a minute or two to ramp up after being turned on, so be patient.

The other must have is a Deep Cycle Marine battery. I got mine from Bass Pro Shop during a sale. I went with a DCM 175, mid-sized for what is available. With good conservation I use it about three days before a charge is needed. I also suggest that you get a battery case with a lid, the lid is designed to be on with the inverter connected. The case prevents accidentally

touching the posts, keeps water from the connectors and contains battery acid should it happen to leak. A gel cell battery is available but they are two to three times the cost.

I highly recommend you have a car battery charger. Do not rely on the site to have a charger-- they may not or it may be in use when you need it if they have one. Charge the battery before you go and have the charger on hand in case you find the battery drained at the event. Get a good one, such as a 10/2/50 Amp, this has three settings the higher will recharge the battery faster. The 2 amp trickle charge will takes days to recharge the battery. A voltmeter is good to have as well to check the battery level, a good charger has one built in.

As I said that's what is really needed but if you want to have an extended stay and be off grid because the site has no power at all. Then you can get a 45 Watt Solar Power Kit (HF), it's about \$200 but goes on sale a few times a year for around \$140. It has instruction on the set up, but still need the above items. In the morning you take the inverter off and connect the solar charger on to the battery.

Well this will get you started. The inverter, battery, and charger will cost around \$250. So shop the sales and get on the mailing lists for the sale fliers. When you consider what a motel costs for that one-time stay, you can have a system on hand from that point on for about the same cost. I also have a few hand tools such as pliers, screw drivers, and a battery terminal brush.

Call for contributions

Please send your artwork, art documentation, photographs (with modeling permission to publish), stories, poems, puns (we will redact saucy ones, unfortunately, but would love to have them anyway), filk songs, tall tales, anecdotes from events (please!), puzzles, how-to videos (again please supply copyright and source as we can only refer to links when there are copyright issues), handouts (ditto), maps, or anything your heart desires for *The Clouded Issue* to <u>chronicler@greyniche.net</u>. Please send citation of where you found information, if at all possible. Most sincerely, your Chronicler.

Upcoming Chronicler Projects

For the many bibliophiles out there, I would also like to publish a list of member's favorite resources, online or in or out of print. Please send these to me at chronicler address mentioned above OR by facebook message. I will be glad to share this also with such offices as A&S, Youth Marshall, Knight Marshall, etc....

Editorial note

On a similar note, your lowly chronicler, moi, would like to acknowledge the many talents in this

group. I would like to print a list of such skills that each member has – or interests. Thou dost not have to be a knowne worlde expert, either! (I know, I know, I am mixing languages) While most of us know who is expert in, say, rapier fighting or wool dyeing, for those just moving to the area or new to the SCA, it might be nice

to see such a list. And it also doesn't have to be comprehensive—as we all are continually growing or changing interests.
